Chapter 1

liboqs-cpp

C++ bindings for liboqs

Build status:

liboqs-cpp offers a C++ wrapper for the `Open Quantum Safe liboqs` C library.

Contents

liboqs-cpp is a header-only wrapper. The project contains the following files:

- `include/oqs_cpp.h`: the main header filed
- `examples/kem.cpp`: key encapsulation example
- `examples/sig.cpp`: signature example
- `unit_tests`: unit tests written using Google Test (included)
- `doc`: Doxygen-generated detailed documentation

Usage

To avoid name collisions, liboqs-cpp includes all its code inside the namespace `oqs`. liboqs-cpp defines four main classes: `oqs::KeyEncapsulation` and `oqs::Signature`, providing post-quantum key encapsulation and signture mechanisms, respectively, and `oqs::KEMs` and `oqs::Sigs`, containing only static member functions that provide information related to the available key encapsulation mechanisms or signature mechanism, respectively.

`oqs::KeyEncapsulation` and/or `oqs::Signature` must be instantiated with a string identifying one of mechanisms supported by liboqs; these can be enumerated using the `oqs::KEMs::get_enabled_KEM_mechanisms()` and `oqs::Sigs::get_enabled_sig_mechanisms()` member functions.

The examples in `examples` file details the wrapper's API.

liboqs installation

liboqs-cpp depends on the `liboqs` C library; liboqs must be compiled as a Linux/macOS static library or as a Windows DLL, and be visible to the wrapper, e.g. installed in a system-wide folder.

Compiling on UNIX-like platforms

To use the wrapper, the user must simply `#include "oqs_cpp.h"`. The wrapper contains a CMake build system for both examples and unit tests. To compile and run the examples, create a `build` folder inside the root folder of the project, change directory to it, then type

```
cmake ..; make -j;
```

The above commands build `oqs_cpp_kem` and `oqs_cpp_sig` examples, assuming the CMake build system is available on the user's platform.

To compile and run the unit tests, first `cd unit_tests`, then create a `build` folder inside `unit_tests`, change directory to it, and finally type

```
cmake ..; make -j;
```

The above commands build `oqs_cpp_testing` suite of unit tests.

liboqs-cpp has been extensively tested on Linux and macOS systems. Continuous integration is provided via Travis CI.

Compiling on Windows

A Visual Studio solution will be provided soon.

Limitations and security

liboqs is designed for prototyping and evaluating quantum-resistant cryptography. Security of proposed quantum-resistant algorithms may rapidly change as research advances, and may ultimately be completely insecure against either classical or quantum computers.

We believe that the NIST Post-Quantum Cryptography standardization project is currently the best avenue to identifying potentially quantum-resistant algorithms. liboqs does not intend to "pick winners", and we strongly recommend that applications and protocols rely on the outcomes of the NIST standardization project when deploying post-quantum cryptography.

We acknowledge that some parties may want to begin deploying post-quantum cryptography prior to the conclusion of the NIST standardization project. We strongly recommend that any attempts to do make use of so-called **hybrid cryptography**, in which post-quantum public-key algorithms are used alongside traditional public key algorithms (like RSA or elliptic curves) so that the solution is at least no less secure than existing traditional cryptography.

Just like liboqs, liboqs-cpp is provided "as is", without warranty of any kind. See `LICENSE` for the full disclaimer.

License

liboqs-cpp is licensed under the MIT License; see `LICENSE` for details.

Team

The Open Quantum Safe project is led by Douglas Stebila and Michele Mosca at the University of Waterloo.

Contributors

Contributors to the liboqs-cpp wrapper include:

- Vlad Gheorghiu (evolutionQ, University of Waterloo)

Namespace Index

2.1 Namespace List

Here is a list of all namespaces with brief descriptions:

impl_details_
Implementation details 13
oqs
Main namespace for the liboqs C++ wrapper 13
oqs::impl_details_ 14
oqs_literals 14

Chapter 3

Hierarchical Index

3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

oqs::KeyEncapsulation::alg_details_ 17
oqs::Signature::alg_details_ 19
oqs::KeyEncapsulation 24
runtime_error
    oqs::MechanismNotEnabledError 29
    oqs::MechanismNotSupportedError 31
oqs::Signature 32
oqs::impl_details_::Singleton< T > 41
    oqs::KEMs 20
oqs::impl_details_::Singleton< const KEMs > 41
oqs::impl_details_::Singleton< const Sigs > 41
    oqs::Sigs 37

Chapter 4

Class Index

4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

oqs::KeyEncapsulation::alg_details_
: KEM algorithm details 17

oqs::Signature::alg_details_
: Signature algorithm details 19

oqs::KEMs
: Singleton class, contains details about supported/enabled key exchange mechanisms (KEMs) 20

oqs::KeyEncapsulation
: Key encapsulation mechanisms 24

oqs::MechanismNotEnabledError
: Cryptographic scheme not enabled 29

oqs::MechanismNotSupportedError
: Cryptographic scheme not supported 31

oqs::Signature
: Signature mechanisms 32

oqs::Sigs
: Singleton class, contains details about supported/enabled signature mechanisms 37

oqs::impl_details_::Singleton< T >
: Singleton class using CRTP pattern 41

Chapter 5

File Index

5.1 File List

Here is a list of all files with brief descriptions:

oqs_cpp.h
Main header file for the liboqs C++ wrapper 43

Chapter 6

Namespace Documentation

6.1 impl_details_ Namespace Reference

Implementation details.

6.1.1 Detailed Description

Implementation details.

6.2 oqs Namespace Reference

Main namespace for the liboqs C++ wrapper.

Namespaces

- impl_details_

Classes

- class KEMs

  Singleton class, contains details about supported/enabled key exchange mechanisms (KEMs)
- class KeyEncapsulation

  Key encapsulation mechanisms.
- class MechanismNotEnabledError

  Cryptographic scheme not enabled.
- class MechanismNotSupportedError

  Cryptographic scheme not supported.
- class Signature

  Signature mechanisms.
- class Sigs

  Singleton class, contains details about supported/enabled signature mechanisms.

Typedefs

- using byte = std::uint8_t
  byte (unsigned)
- using bytes = std::vector< byte >
  vector of bytes (unsigned)

6.2.1 Detailed Description

Main namespace for the liboqs C++ wrapper.

6.2.2 Typedef Documentation

6.2.2.1 byte

```
using oqs::byte = typedef std::uint8_t
```

byte (unsigned)

6.2.2.2 bytes

```
using oqs::bytes = typedef std::vector<byte>
```

vector of bytes (unsigned)

6.3 oqs::impl_details_ Namespace Reference

Classes

- class Singleton
  Singleton class using CRTP pattern.

6.4 oqs_literals Namespace Reference

Functions

- oqs::bytes operator""_bytes (const char *c_str, std::size_t length)
  User-defined literal operator for converting C-style strings to oqs::bytes.

6.4.1 Function Documentation

6.4.1.1 operator"""_bytes()

```
oqs::bytes oqs_literals::operator""_bytes (
            const char * c_str,
            std::size_t length )  [inline]
```

User-defined literal operator for converting C-style strings to oqs::bytes.

Note

The null terminator is not included

Parameters

c_str	C-style string
length	C-style string length (deduced automatically by the compiler)

Returns

The byte representation of the input C-style string

Chapter 7

Class Documentation

7.1 oqs::KeyEncapsulation::alg_details_ Struct Reference

KEM algorithm details.

Public Attributes

- std::string name
- std::string version
- std::size_t claimed_nist_level
- bool is_ind_cca
- std::size_t length_public_key
- std::size_t length_secret_key
- std::size_t length_ciphertext
- std::size_t length_shared_secret

7.1.1 Detailed Description

KEM algorithm details.

7.1.2 Member Data Documentation

7.1.2.1 claimed_nist_level

```
std::size_t oqs::KeyEncapsulation::alg_details_::claimed_nist_level
```

7.1.2.2 is_ind_cca

```
bool oqs::KeyEncapsulation::alg_details_::is_ind_cca
```

7.1.2.3 length_ciphertext

```
std::size_t oqs::KeyEncapsulation::alg_details_::length_ciphertext
```

7.1.2.4 length_public_key

```
std::size_t oqs::KeyEncapsulation::alg_details_::length_public_key
```

7.1.2.5 length_secret_key

```
std::size_t oqs::KeyEncapsulation::alg_details_::length_secret_key
```

7.1.2.6 length_shared_secret

```
std::size_t oqs::KeyEncapsulation::alg_details_::length_shared_secret
```

7.1.2.7 name

```
std::string oqs::KeyEncapsulation::alg_details_::name
```

7.1.2.8 version

```
std::string oqs::KeyEncapsulation::alg_details_::version
```

The documentation for this struct was generated from the following file:

- oqs_cpp.h

7.2 oqs::Signature::alg_details_ Struct Reference

Signature algorithm details.

Public Attributes

- std::string name
- std::string version
- std::size_t claimed_nist_level
- bool is_euf_cma
- std::size_t length_public_key
- std::size_t length_secret_key
- std::size_t length_signature

7.2.1 Detailed Description

Signature algorithm details.

7.2.2 Member Data Documentation

7.2.2.1 claimed_nist_level

```
std::size_t oqs::Signature::alg_details_::claimed_nist_level
```

7.2.2.2 is_euf_cma

```
bool oqs::Signature::alg_details_::is_euf_cma
```

7.2.2.3 length_public_key

```
std::size_t oqs::Signature::alg_details_::length_public_key
```

7.2.2.4 length_secret_key

```
std::size_t oqs::Signature::alg_details_::length_secret_key
```

7.2.2.5 length_signature

```
std::size_t oqs::Signature::alg_details_::length_signature
```

7.2.2.6 name

```
std::string oqs::Signature::alg_details_::name
```

7.2.2.7 version

```
std::string oqs::Signature::alg_details_::version
```

The documentation for this struct was generated from the following file:

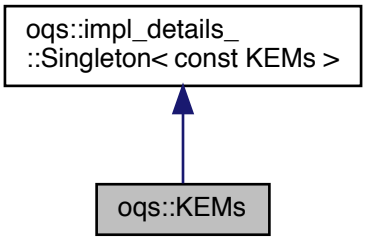
- oqs_cpp.h

7.3 oqs::KEMs Class Reference

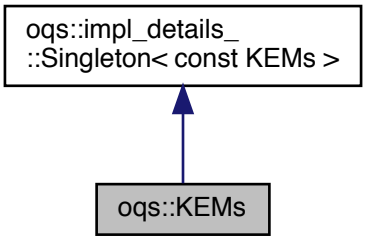
Singleton class, contains details about supported/enabled key exchange mechanisms (KEMs)

```
#include <oqs_cpp.h>
```

Inheritance diagram for oqs::KEMs:



Collaboration diagram for oqs::KEMs:



Static Public Member Functions

- static std::size_t max_number_KEMs ()

  Maximum number of supported KEMs.
- static bool is_KEM_supported (const std::string &alg_name)

  Checks whether the KEM algorithm alg_name is supported.
- static bool is_KEM_enabled (const std::string &alg_name)

  Checks whether the KEM algorithm alg_name is enabled.
- static std::string get_KEM_name (std::size_t alg_id)

  KEM algorithm name.
- static std::vector< std::string > get_supported_KEMs ()

  List of supported KEM algorithms.
- static std::vector< std::string > get_enabled_KEMs ()

  List of enabled KEM algorithms.

Private Member Functions

- KEMs ()=default

  Private default constructor.

Friends

- class impl_details_::Singleton< const KEMs >

Additional Inherited Members

7.3.1 Detailed Description

Singleton class, contains details about supported/enabled key exchange mechanisms (KEMs)

7.3.2 Constructor & Destructor Documentation

7.3.2.1 KEMs()

```
oqs::KEMs::KEMs ( )  [private], [default]
```

Private default constructor.

Note

Use oqs::KEMs::get_instance() to create an instance

7.3.3 Member Function Documentation

7.3.3.1 get_enabled_KEMs()

```
static std::vector<std::string> oqs::KEMs::get_enabled_KEMs ( )  [inline], [static]
```

List of enabled KEM algorithms.

Returns

List of enabled KEM algorithms

7.3.3.2 get_KEM_name()

```
static std::string oqs::KEMs::get_KEM_name (
            std::size_t alg_id )  [inline], [static]
```

KEM algorithm name.

Parameters

alg_id	Cryptographic algorithm numerical id

Returns

KEM algorithm name

7.3.3.3 get_supported_KEMs()

```
static std::vector<std::string> oqs::KEMs::get_supported_KEMs ( )  [inline], [static]
```

List of supported KEM algorithms.

Returns

List of supported KEM algorithms

7.3.3.4 is_KEM_enabled()

```
static bool oqs::KEMs::is_KEM_enabled (
            const std::string & alg_name )  [inline], [static]
```

Checks whether the KEM algorithm *alg_name* is enabled.

Parameters

alg_name	Cryptographic algorithm name

Returns

True if the KEM algorithm is enabled, false otherwise

7.3.3.5 is_KEM_supported()

```
static bool oqs::KEMs::is_KEM_supported (
            const std::string & alg_name )  [inline], [static]
```

Checks whether the KEM algorithm *alg_name* is supported.

Parameters

alg_name	Cryptographic algorithm name

Returns

True if the KEM algorithm is supported, false otherwise

7.3.3.6 max_number_KEMs()

```
static std::size_t oqs::KEMs::max_number_KEMs ( )  [inline], [static]
```

Maximum number of supported KEMs.

Returns

Maximum number of supported KEMs

7.3.4 Friends And Related Function Documentation

7.3.4.1 impl_details_::Singleton< const KEMs >

```
friend class impl_details_::Singleton< const KEMs >  [friend]
```

The documentation for this class was generated from the following file:

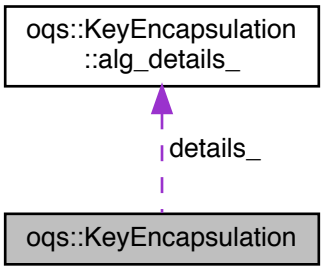
- oqs_cpp.h

7.4 oqs::KeyEncapsulation Class Reference

Key encapsulation mechanisms.

```
#include <oqs_cpp.h>
```

Collaboration diagram for oqs::KeyEncapsulation:



Classes

- struct alg_details_

  KEM algorithm details.

Public Member Functions

- KeyEncapsulation (const std::string &alg_name, const bytes &secret_key={})
  Constructs an instance of oqs::KeyEncapsulation.
- virtual ~KeyEncapsulation ()
  Virtual default destructor.
- const alg_details_ & get_details () const
  KEM algorithm details.
- bytes generate_keypair ()
  Generate public key/secret key pair.
- bytes export_secret_key () const
  Export secret key.
- std::pair< bytes, bytes > encap_secret (const bytes &public_key) const
  Encapsulate secret.
- bytes decap_secret (const bytes &ciphertext) const
  Decapsulate secret.

Private Attributes

- const std::string alg_name_
  cryptographic algorithm name
- std::shared_ptr<::OQS_KEM > kem_
  liboqs smart pointer to ::OQS_KEM
- bytes secret_key_ {}
  secret key
- struct oqs::KeyEncapsulation::alg_details_ details_

Friends

- std::ostream & operator<< (std::ostream &os, const alg_details_ &rhs)
  std::ostream extraction operator for the KEM algorithm details
- std::ostream & operator<< (std::ostream &os, const KeyEncapsulation &rhs)
  std::ostream extraction operator for oqs::KeyEncapsulation

7.4.1 Detailed Description

Key encapsulation mechanisms.

7.4.2 Constructor & Destructor Documentation

7.4.2.1 KeyEncapsulation()

```
oqs::KeyEncapsulation::KeyEncapsulation (
            const std::string & alg_name,
            const bytes & secret_key = {} )  [inline]
```

Constructs an instance of oqs::KeyEncapsulation.

Parameters

alg_name	Cryptographic algorithm name
secret_key	Secret key (optional)

7.4.2.2 ~KeyEncapsulation()

```
virtual oqs::KeyEncapsulation::~KeyEncapsulation ( )  [inline], [virtual]
```

Virtual default destructor.

7.4.3 Member Function Documentation

7.4.3.1 decap_secret()

```
bytes oqs::KeyEncapsulation::decap_secret (
            const bytes & ciphertext ) const  [inline]
```

Decapsulate secret.

Parameters

ciphertext	Ciphertext

Returns

Shared secret

7.4.3.2 encap_secret()

```
std::pair<bytes, bytes> oqs::KeyEncapsulation::encap_secret (
            const bytes & public_key ) const  [inline]
```

Encapsulate secret.

Parameters

public_key	Public key

Returns

Pair consisting of 1) ciphertext, and 2) shared secret

7.4.3.3 export_secret_key()

```
bytes oqs::KeyEncapsulation::export_secret_key ( ) const  [inline]
```

Export secret key.

Returns

Secret key

7.4.3.4 generate_keypair()

```
bytes oqs::KeyEncapsulation::generate_keypair ( )  [inline]
```

Generate public key/secret key pair.

Returns

Public key

7.4.3.5 get_details()

```
const alg_details_& oqs::KeyEncapsulation::get_details ( ) const  [inline]
```

KEM algorithm details.

Returns

KEM algorithm details

7.4.4 Friends And Related Function Documentation

7.4.4.1 operator<< [1/2]

```
std::ostream& operator<< (
            std::ostream & os,
            const alg_details_ & rhs )  [friend]
```

std::ostream extraction operator for the KEM algorithm details

Parameters

os	Output stream
rhs	Algorithm details instance

Returns

Reference to the output stream

7.4.4.2 operator<< [2/2]

```
std::ostream& operator<< (
            std::ostream & os,
            const KeyEncapsulation & rhs )  [friend]
```

std::ostream extraction operator for oqs::KeyEncapsulation

Parameters

os	Output stream
rhs	Key encapsulation instance

Returns

Reference to the output stream

7.4.5 Member Data Documentation

7.4.5.1 alg_name_

```
const std::string oqs::KeyEncapsulation::alg_name_  [private]
```

cryptographic algorithm name

7.4.5.2 details_

```
struct oqs::KeyEncapsulation::alg_details_ oqs::KeyEncapsulation::details_  [private]
```

7.4.5.3 kem_

```
std::shared_ptr<::OQS_KEM> oqs::KeyEncapsulation::kem_  [private]
```

Initial value:

```
{nullptr, [](::OQS_KEM* p) {
                                        ::OQS_KEM_free(p);
                                    }}
```

liboqs smart pointer to ::OQS_KEM

7.4.5.4 secret_key_

```
bytes oqs::KeyEncapsulation::secret_key_ {}  [private]
```

secret key

  Constructor.

7.5.1 Detailed Description

Cryptographic scheme not enabled.

7.5.2 Constructor & Destructor Documentation

7.5.2.1 MechanismNotEnabledError()

```
oqs::MechanismNotEnabledError::MechanismNotEnabledError (
            const std::string & alg_name )  [inline]
```

Constructor.

Parameters

alg_name	Cryptographic algorithm name

The documentation for this class was generated from the following file:

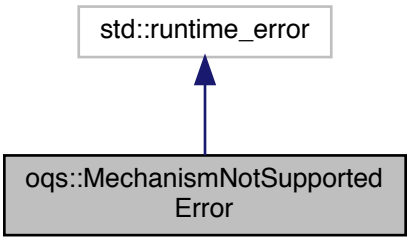
- oqs_cpp.h

7.6 oqs::MechanismNotSupportedError Class Reference

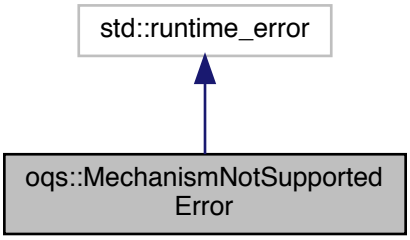
Cryptographic scheme not supported.

`#include <oqs_cpp.h>`

Inheritance diagram for oqs::MechanismNotSupportedError:



Collaboration diagram for oqs::MechanismNotSupportedError:



Public Member Functions

- MechanismNotSupportedError (const std::string &alg_name)

  Constructor.

7.6.1 Detailed Description

Cryptographic scheme not supported.

7.6.2 Constructor & Destructor Documentation

7.6.2.1 MechanismNotSupportedError()

```
oqs::MechanismNotSupportedError::MechanismNotSupportedError (
            const std::string & alg_name )  [inline]
```

Constructor.

Parameters

alg_name	Cryptographic algorithm name

The documentation for this class was generated from the following file:

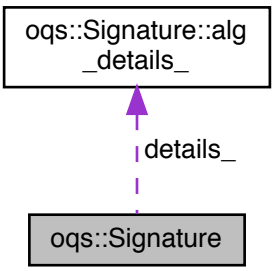
- oqs_cpp.h

7.7 oqs::Signature Class Reference

Signature mechanisms.

```
#include <oqs_cpp.h>
```

Collaboration diagram for oqs::Signature:



Classes

- struct alg_details_

  Signature algorithm details.

Public Member Functions

- Signature (const std::string &alg_name, const bytes &secret_key={})
  Constructs an instance of oqs::Signature.
- virtual ~Signature ()
  Virtual default destructor.
- const alg_details_ & get_details () const
  Signature algorithm details.
- bytes generate_keypair ()
  Generate public key/secret key pair.
- bytes export_secret_key () const
  Export secret key.
- bytes sign (const bytes &message)
  Sign message.
- bool verify (const bytes &message, const bytes &signature, const bytes &public_key)
  Verify signature.

Private Attributes

- const std::string alg_name_
  cryptographic algorithm name
- std::shared_ptr<::OQS_SIG > sig_
  liboqs smart pointer to ::OQS_SIG
- bytes secret_key_ {}
  secret key
- struct oqs::Signature::alg_details_ details_

Friends

- std::ostream & operator<< (std::ostream &os, const alg_details_ &rhs)
  std::ostream extraction operator for the signature algorithm details
- std::ostream & operator<< (std::ostream &os, const Signature &rhs)
  std::ostream extraction operator for oqs::Signature

7.7.1 Detailed Description

Signature mechanisms.

7.7.2 Constructor & Destructor Documentation

7.7.2.1 Signature()

```
oqs::Signature::Signature (
            const std::string & alg_name,
            const bytes & secret_key = {} )  [inline]
```

Constructs an instance of oqs::Signature.

Parameters

alg_name	Cryptographic algorithm name
secret_key	Secret key (optional)

7.7.2.2 ~Signature()

```
virtual oqs::Signature::~Signature ( )  [inline], [virtual]
```

Virtual default destructor.

7.7.3 Member Function Documentation

7.7.3.1 export_secret_key()

```
bytes oqs::Signature::export_secret_key ( ) const  [inline]
```

Export secret key.

Returns

Secret key

7.7.3.2 generate_keypair()

```
bytes oqs::Signature::generate_keypair ( )  [inline]
```

Generate public key/secret key pair.

Returns

Public key

7.7.3.3 get_details()

```
const alg_details_& oqs::Signature::get_details ( ) const  [inline]
```

Signature algorithm details.

Returns

Signature algorithm details

7.7.3.4 sign()

```
bytes oqs::Signature::sign (
            const bytes & message )  [inline]
```

Sign message.

Parameters

message	Message

Returns

Message signature

7.7.3.5 verify()

```
bool oqs::Signature::verify (
            const bytes & message,
            const bytes & signature,
            const bytes & public_key )  [inline]
```

Verify signature.

Parameters

message	Message
signature	Signature
public_key	Public key

Returns

True if the signature is valid, false otherwise

7.7.4 Friends And Related Function Documentation

7.7.4.1 operator<< [1/2]

```
std::ostream& operator<< (
            std::ostream & os,
            const alg_details_ & rhs )  [friend]
```

std::ostream extraction operator for the signature algorithm details

Parameters

os	Output stream
rhs	Algorithm details

Returns

Reference to the output stream

7.7.4.2 operator<< [2/2]

```
std::ostream& operator<< (
            std::ostream & os,
            const Signature & rhs )  [friend]
```

std::ostream extraction operator for oqs::Signature

Parameters

os	Output stream
rhs	Signature instance

Returns

Reference to the output stream

7.7.5 Member Data Documentation

7.7.5.1 alg_name_

```
const std::string oqs::Signature::alg_name_  [private]
```

cryptographic algorithm name

7.7.5.2 details_

```
struct oqs::Signature::alg_details_ oqs::Signature::details_  [private]
```

7.7.5.3 secret_key_

```
bytes oqs::Signature::secret_key_ {}  [private]
```

secret key

7.7.5.4 sig_

```
std::shared_ptr<::OQS_SIG> oqs::Signature::sig_  [private]
```

Initial value:

```
{nullptr, [](::OQS_SIG* p) {
                                        ::OQS_SIG_free(p);
                                    }}
```

liboqs smart pointer to ::OQS_SIG

The documentation for this class was generated from the following file:

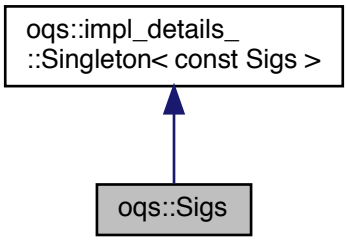
- oqs_cpp.h

7.8 oqs::Sigs Class Reference

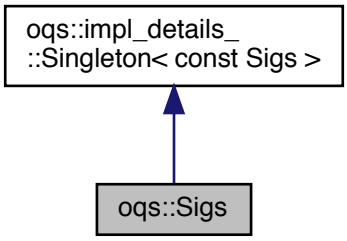
Singleton class, contains details about supported/enabled signature mechanisms.

`#include <oqs_cpp.h>`

Inheritance diagram for oqs::Sigs:



Collaboration diagram for oqs::Sigs:



Static Public Member Functions

- static std::size_t max_number_Sigs ()

  Maximum number of supported signatures.
- static bool is_Sig_supported (const std::string &alg_name)

  Checks whether the signature algorithm alg_name is supported.
- static bool is_Sig_enabled (const std::string &alg_name)

  Checks whether the signature algorithm alg_name is enabled.
- static std::string get_Sig_name (std::size_t alg_id)

  Signature algorithm name.
- static std::vector< std::string > get_supported_Sigs ()

  List of supported signature algorithms.
- static std::vector< std::string > get_enabled_Sigs ()

  List of enabled KEM algorithms.

Private Member Functions

- Sigs ()=default

  Private default constructor.

Friends

- class impl_details_::Singleton< const Sigs >

Additional Inherited Members

7.8.1 Detailed Description

Singleton class, contains details about supported/enabled signature mechanisms.

7.8.2 Constructor & Destructor Documentation

7.8.2.1 Sigs()

```
oqs::Sigs::Sigs ( )  [private], [default]
```

Private default constructor.

Note

Use oqs::Sigs::get_instance() to create an instance

7.8.3 Member Function Documentation

7.8.3.1 get_enabled_Sigs()

```
static std::vector<std::string> oqs::Sigs::get_enabled_Sigs ( )  [inline], [static]
```

List of enabled KEM algorithms.

Returns

List of enabled KEM algorithms

7.8.3.2 get_Sig_name()

```
static std::string oqs::Sigs::get_Sig_name (
            std::size_t alg_id )  [inline], [static]
```

Signature algorithm name.

Parameters

alg_id	Cryptographic algorithm numerical id

Returns

Signature algorithm name

7.8.3.3 get_supported_Sigs()

```
static std::vector<std::string> oqs::Sigs::get_supported_Sigs ( )  [inline], [static]
```

List of supported signature algorithms.

Returns

List of supported signature algorithms

7.8.3.4 is_Sig_enabled()

```
static bool oqs::Sigs::is_Sig_enabled (
            const std::string & alg_name )  [inline], [static]
```

Checks whether the signature algorithm *alg_name* is enabled.

Parameters

alg_name	Cryptographic algorithm name

Returns

True if the signature algorithm is enabled, false otherwise

7.8.3.5 is_Sig_supported()

```
static bool oqs::Sigs::is_Sig_supported (
            const std::string & alg_name )  [inline], [static]
```

Checks whether the signature algorithm *alg_name* is supported.

Parameters

alg_name	Cryptographic algorithm name

Returns

True if the signature algorithm is supported, false otherwise

7.8.3.6 max_number_Sigs()

```
static std::size_t oqs::Sigs::max_number_Sigs ( )  [inline], [static]
```

Maximum number of supported signatures.

Returns

Maximum number of supported signatures

7.8.4 Friends And Related Function Documentation

7.8.4.1 impl_details_::Singleton< const Sigs >

```
friend class impl_details_::Singleton< const Sigs >  [friend]
```

The documentation for this class was generated from the following file:

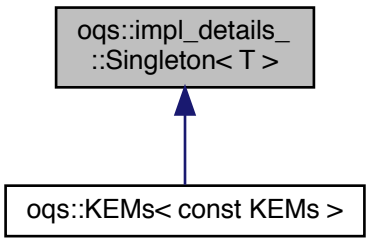
- oqs_cpp.h

7.9 oqs::impl_details_::Singleton< T > Class Template Reference

Singleton class using CRTP pattern.

`#include <oqs_cpp.h>`

Inheritance diagram for oqs::impl_details_::Singleton< T >:



Static Public Member Functions

- static T & get_instance () noexcept(std::is_nothrow_constructible< T >::value)
  Singleton instance (thread-safe) via CRTP pattern.

Protected Member Functions

- Singleton () noexcept=default
- Singleton (const Singleton &)=delete
- Singleton & operator= (const Singleton &)=delete
- virtual ~Singleton ()=default

7.9.1 Detailed Description

template<typename T>
class oqs::impl_details_::Singleton< T >

Singleton class using CRTP pattern.

Template Parameters

T	Class type of which instance will become a Singleton

7.9.2 Constructor & Destructor Documentation

7.9.2.1 Singleton() [1/2]

```
template<typename T>
oqs::impl_details_::Singleton< T >::Singleton ( )  [protected], [default], [noexcept]
```

7.9.2.2 Singleton() [2/2]

```
template<typename T>
oqs::impl_details_::Singleton< T >::Singleton (
            const Singleton< T > &  )  [protected], [delete]
```

7.9.2.3 ~Singleton()

```
template<typename T>
virtual oqs::impl_details_::Singleton< T >::~Singleton ( )  [protected], [virtual], [default]
```

7.9.3 Member Function Documentation

7.9.3.1 get_instance()

```
template<typename T>
static T& oqs::impl_details_::Singleton< T >::get_instance ( )  [inline], [static], [noexcept]
```

Singleton instance (thread-safe) via CRTP pattern.

Note

Code from https://github.com/vsoftco/qpp/blob/master/include/internal/classes/singleton.h

Returns

Singleton instance

7.9.3.2 operator=()

```
template<typename T>
Singleton& oqs::impl_details_::Singleton< T >::operator= (
            const Singleton< T > &  )  [protected], [delete]
```

The documentation for this class was generated from the following file:

- oqs_cpp.h

Chapter 8

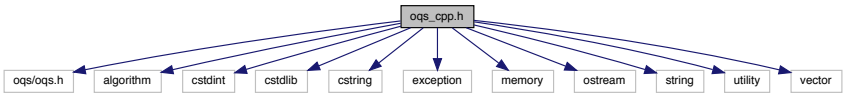
File Documentation

8.1 oqs_cpp.h File Reference

Main header file for the liboqs C++ wrapper.

```
#include <oqs/oqs.h>
#include <algorithm>
#include <cstdint>
#include <cstdlib>
#include <cstring>
#include <exception>
#include <memory>
#include <ostream>
#include <string>
#include <utility>
#include <vector>
```

Include dependency graph for oqs_cpp.h:



Classes

- class oqs::impl_details_::Singleton< T >

  Singleton class using CRTP pattern.
- class oqs::MechanismNotSupportedError

  Cryptographic scheme not supported.
- class oqs::MechanismNotEnabledError

  Cryptographic scheme not enabled.
- class oqs::KEMs

  Singleton class, contains details about supported/enabled key exchange mechanisms (KEMs)
- class oqs::KeyEncapsulation

  Key encapsulation mechanisms.

- struct oqs::KeyEncapsulation::alg_details_
  KEM algorithm details.
- class oqs::Sigs
  Singleton class, contains details about supported/enabled signature mechanisms.
- class oqs::Signature
  Signature mechanisms.
- struct oqs::Signature::alg_details_
  Signature algorithm details.

Namespaces

- oqs
  Main namespace for the liboqs C++ wrapper.
- impl_details_
  Implementation details.
- oqs::impl_details_
- oqs_literals

Typedefs

- using oqs::byte = std::uint8_t
  byte (unsigned)
- using oqs::bytes = std::vector< byte >
  vector of bytes (unsigned)

Functions

- std::ostream & operator<< (std::ostream &os, const oqs::bytes &rhs)
  std::ostream extraction operator for oqs::bytes
- std::ostream & operator<< (std::ostream &os, const std::vector< std::string > &rhs)
  std::ostream extraction operator for vectors of strings
- oqs::bytes oqs_literals::operator""_bytes (const char *c_str, std::size_t length)
  User-defined literal operator for converting C-style strings to oqs::bytes.

8.1.1 Detailed Description

Main header file for the liboqs C++ wrapper.

8.1.2 Function Documentation

8.1.2.1 operator<<() [1/2]

```
std::ostream& operator<< (
            std::ostream & os,
            const oqs::bytes & rhs )  [inline]
```

std::ostream extraction operator for oqs::bytes

Parameters

os	Output stream
rhs	Signature instance

Returns

Reference to the output stream

8.1.2.2 operator<<() [2/2]

```
std::ostream& operator<< (
            std::ostream & os,
            const std::vector< std::string > & rhs )  [inline]
```

std::ostream extraction operator for vectors of strings

Parameters

os	Output stream
rhs	Signature instance

Returns

Reference to the output stream
